

## **Azotic Technologies Expand North American Agronomy Team**

Azotic Technologies has appointed Dr Thomas Reed as a Research Agronomist in North America. As part of the company's North American Agronomy Team he will be involved in managing the field trials programme in the USA and Canada. These trials are designed to assess and monitor the results of Azotic's nitrogen fixing technology.

Tom has excellent qualifications which include a PhD in Horticultural Sciences from the University of Florida and a M Sc in Crop and Soil Sciences from the University of Georgia.

He was a Graduate Research Assistant at both Universities where he was involved in studies on turf grass and horticultural crops. Tom also did an internship with Syngenta which entailed working at a corn hybrid development research station. His expertise in turf grass management and horticultural crops will be a great asset to Azotic's field trial programme.
